Problem H. George and Accommodation

Time limit 1000 ms
Mem limit 262144 kB

George has recently entered the BSUCP (Berland State University for Cool Programmers). George has a friend Alex who has also entered the university. Now they are moving into a dormitory.

George and Alex want to live in the same room. The dormitory has n rooms in total. At the moment the i-th room has p_i people living in it and the room can accommodate q_i people in total ($p_i \le q_i$). Your task is to count how many rooms has free place for both George and Alex.

Input

The first line contains a single integer n ($1 \le n \le 100$) — the number of rooms.

The i-th of the next n lines contains two integers p_i and q_i ($0 \le p_i \le q_i \le 100$) — the number of people who already live in the i-th room and the room's capacity.

Output

Print a single integer — the number of rooms where George and Alex can move in.

Examples

Input	Output
3 1 1 2 2 3 3	0

Input	Output
3 1 10 0 10 10 10	2
